Finest Varieties of **PAPER SHELL PECANS**

Dry Branch, Ga.

HAVE YOU EVER CONSIDERED THIS?

---If you have good land and know you are going to cultivate it every year, you are wasting your time if you do not put pecan trees on it. You are cultivating the space whether the trees are there or not. It costs no more to be growing the trees. Is it not time you were laying the plans for your future prosperity? This is a mighty good form of life insurance.

QUALITY AND PRICES ALWAYS

PARALLEL.---You will find that our prices are higher than a good many others. There is a great difference in quality in nursery stock. We grow only the highest quality and naturally cannot meet cheaper prices. In fact, we make no effort whatever to meet cheaper competition. It is our aim to furnish you not merely as good as you can secure elsewhere but better, and we believe we are doing it. Our motto is "*The Best Only,*" and our best references are *any of our customers*. They are *all satisfied*. Dwarfish and runty trees are not worth the planting and practically insure failure from the beginning. Get our trees, plant and care for them properly

and you will never regret the expenditure. It's lots better to do this than to wish you had.

TIME TO SET. -This varies slightly according to weather conditions, but is usually from the middle of November to the first part of April. They should be dug and transplanted while dormant.

DISTANCE IN PLANTING.---The usual distance of most recent plantings is sixty feet. This puts about twelve to fourteen trees to the acre, according to methods of planting, margins, etc. We do not recommend field plantings closer than sixty feet. Some of the largest trees now living cover practically an acre but are probably over three hundred years old.

VARIETIES.---We do not try to propagate some of all varieties. There are only four varieties which we hold in high enough esteem to use in our plantings for ourselves, and we want our customers to have the best too. These are the varieties we list below and in their order of merit.

FREE OF DISEASE.---Our stock is regularly inspected by the *State Board of Entomology* and their certificate of inspection, guaranteeing our trees free of disease accompanies each and every shipment.

OUR GUARANTEE.---We guarantee every tree sent out to be well grown, properly handled and packed, and true to variety. We take great interest in our work and try to make no mistakes, yet we do not claim to be infallible and stand ready at any and all times to correct any mis-

takes as far as possible, should any occur. If any trees shipped should not prove true to variety labeled we will either replace same free of charge or refund the purchase price, but are not liable for further damages. Our aim is to give you the best of service and want you to know that you are getting it.

Instructions For Transplant- ing Pecan Trees

The first and most important thing to do is to make up your mind not follow the instructions of Tom, Dick and Harry.

Then proceed as follows:

Have your holes ready before the trees arrive if you can. Holes should be full three feet deep and not less than thirty inches in diameter.

If you are not ready to plant when the trees are delivered to you, heel them in soft, moist ground and be sure that you have plenty of dirt over the roots. Never keep the trees out of the ground, exposed to the atmosphere any longer than absolutely necessary. Never expose the roots to a freezing temperature long enough for them to become frozen under any conditions and do not leave them exposed to the sun and wind long enough for them to become dry.

In planting, when you are ready to put the tree in the hole, use a sharp knife and cut off the lacerated ends of all roots, that they may

heal over instead of having to rot off. Rotting wood is a great attraction to wood lice.

Set the tree fully as deep or a little deeper than it stood in the nursery. Measure the tree to the hole before throwing in any dirt. Then get in the hole with the tree, pack the dirt firmly with the feet, taking care to keep the lateral roots in their natural position and not bruise them. The packing is important as your tree will not make any appreciable growth unless it is in close contact with the soil. Do not allow the dirt to be thrown against the tree in filling up the hole.

Should stable fertilizer be used in planting, do not let it come in contact with the roots in any quantity. This is important to remember. Best to mix it thoroughly with the soil.

Use some water if necessary in very dry times, but not enough to mush the dirt, which interferes with packing.

Cultivate and fertilize your trees as well as your other crops. Do not expect them to thrive on inattention.

Our trees properly set, seldom die and frequently bear the second or third year. We add the bearing age when the bud is put on, and as soon as the tree is large enough it is old enough to bear a crop of nuts.

THE DENSON NURSERIES
DRY BRANCH, GA.

PRICE LIST—Stuart, Schley, Money Maker, and Success

HEIGHT	EACH	TEN	Hundred	Thousand
1 to 2 feet	\$.70	\$ 6.00	\$ 50.00	\$ 400.00
2 to 3 feet	.90	8.00	70.00	650.00
3 to 4 feet	1.00	9.00	80.00	750.00
4 to 5 feet	1.15	10.00	90.00	850.00
5 to 6 feet	1.30	11.50	100.00	950.00
6 to 7 feet	1.50	13.00	120.00	1150.00
7 to 8 feet	1.70	14.00	130.00	1250.00
8 to 10 feet	1.90	16.50	150.00	

Five trees take rate of ten, fifty at one hundred rate, etc. Height measured only from ground up. Above prices, F. O. B. Macon, Ga.

We also have every year a few extra special sizes up to \$5.00 per tree. These large trees are especially for yard plantings and some of them have already produced several pounds of nuts in the nursery.

All orders accepted subject to weather and other conditions beyond our control. We cannot ship trees by mail. Our trees are always freshly dug and we make no charge for packing or drayage. Our nurseries are located fifteen miles from Macon on the Cochran road and we will appreciate your visit and inspection. We shall be happy to serve you at any and all times.

DENSON'S Pecan Tree Paint FOR PROTECTION FROM WOOD ROT

Prices: 10-lb. Can, \$2.50

5-lb. Can, \$1.40

It is vitally necessary that all wounds of any size on trees be protected from moisture and fungus infection throughout the healing process.

This paint is prepared as a disinfectant and to furnish complete protection for the longest period of time. It is far superior to and at the same time cheaper than white lead.

In treating old wounds, all the rotted and infected wood should be entirely and neatly removed, before paint is applied.

For detailed information on treatment and prevention of wood rot in pecan trees, secure Farmer's Bulletin No. 995 from the U. S. Department of Agriculture.

This paint will keep indefinitely.

We use this preparation exclusively on our young Nursery Stock with best results.

The Denson Nurseries

DRY BRANCH, GA.

We grow the best---Not the cheapest trees.

THE HISTORY OF

THE CITY OF BOSTON

FROM THE FIRST SETTLEMENT
TO THE PRESENT TIME

BY
JOHN H. COLEMAN

The history of the city of Boston is a subject of great interest to the people of this city and to those of other cities. It is a history of a city which has been the seat of government, the center of commerce, and the home of many of the great men of the world. The history of the city is a history of the growth of a city from a small fishing village to a great metropolis. It is a history of the struggles of a city to maintain its independence and its freedom. It is a history of the triumphs of a city which has been the seat of government, the center of commerce, and the home of many of the great men of the world.
